

# Business Password Management Tool from Absolutely PC

Keep Your Passwords  
Safe & Secure

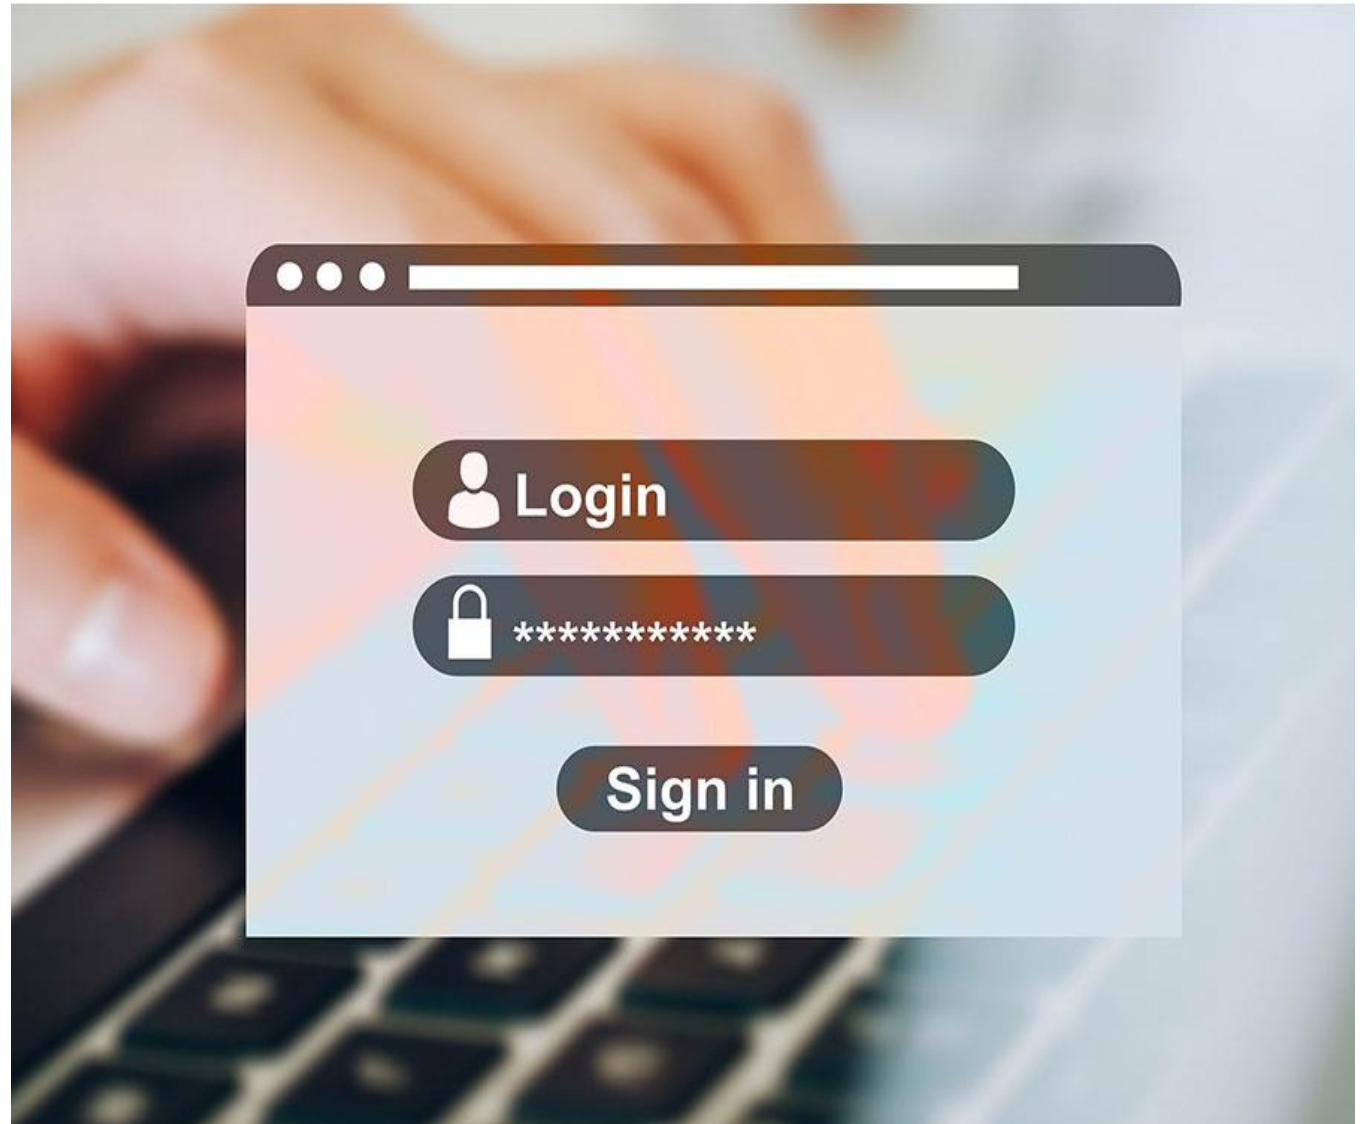

**Absolutely PC**

*Making I.T. work for you*

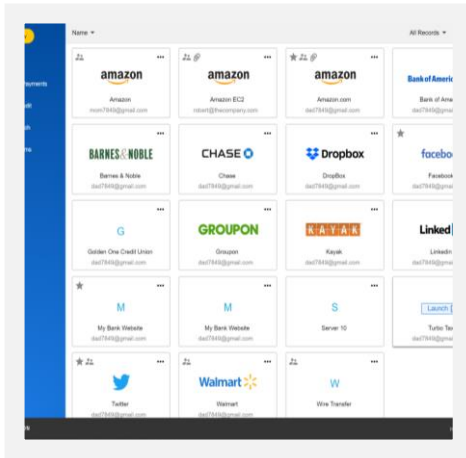

# Why Password Management Matters

Password management may seem like a simple process, but it remains the leading cause of data breaches for businesses.

- 81% of all data breaches are caused by weak or stolen passwords.
- A small business in the UK is successfully hacked every 19 seconds.
- Cyber breaches cost the average small business £25,700 in basic 'clear up' costs every year.
- Your passwords could be available on the 'Dark Web' if any platform you use suffers a breach.

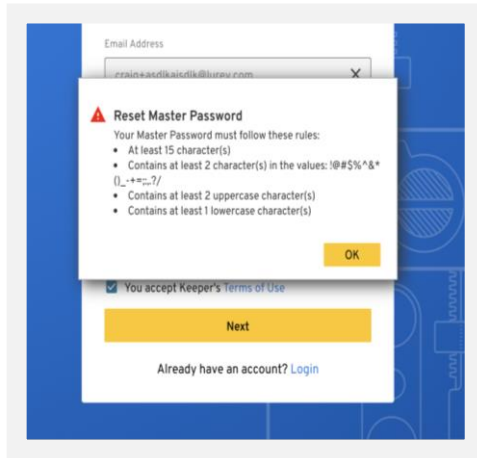

# Password Management Tool - Key Features

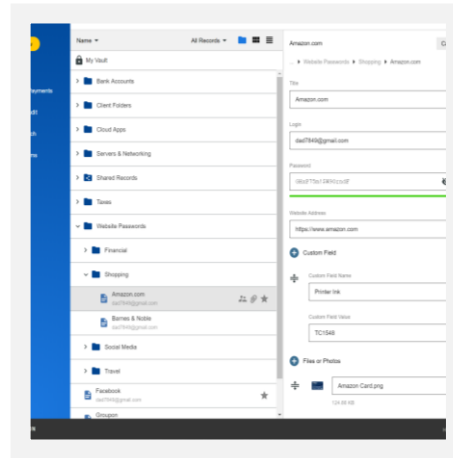

## Password Management

Automatically suggests and remembers strong passwords for websites and applications.

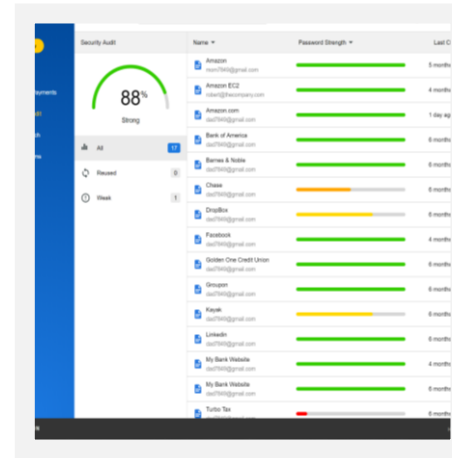

## Policy Enforcements

Enforce policies on password strength across the entire business in one click.

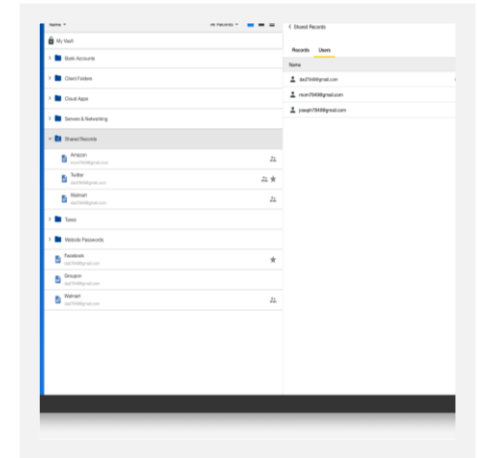

## Encrypted Vault

Employees have their own encrypted vault where passwords and other data is stored.

## Security Audit

Security audits provide insights into the overall password security of the business.

## Role Based Access Controls

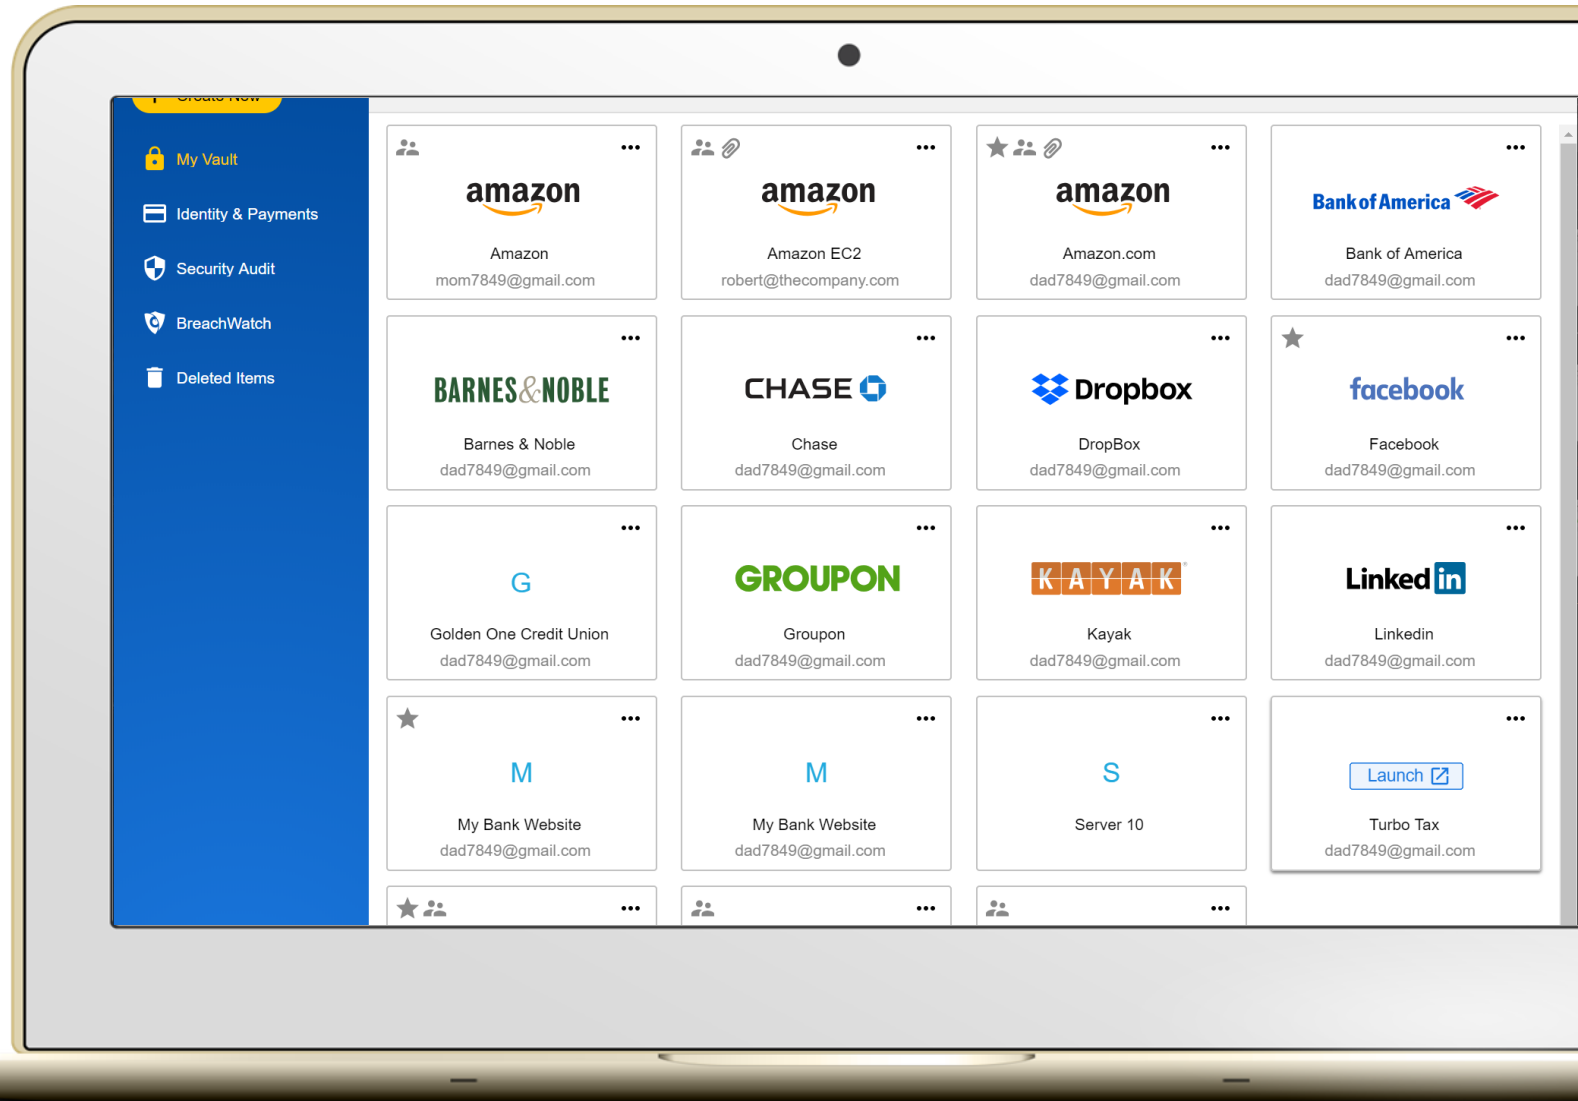

Restrict access to passwords to those that need it with role-based access controls.

# Password Management

The tool automatically suggests and remembers unique and strong passwords for employees.

When the website is accessed, the tool will fill in the password without the employee needing to copy and paste.

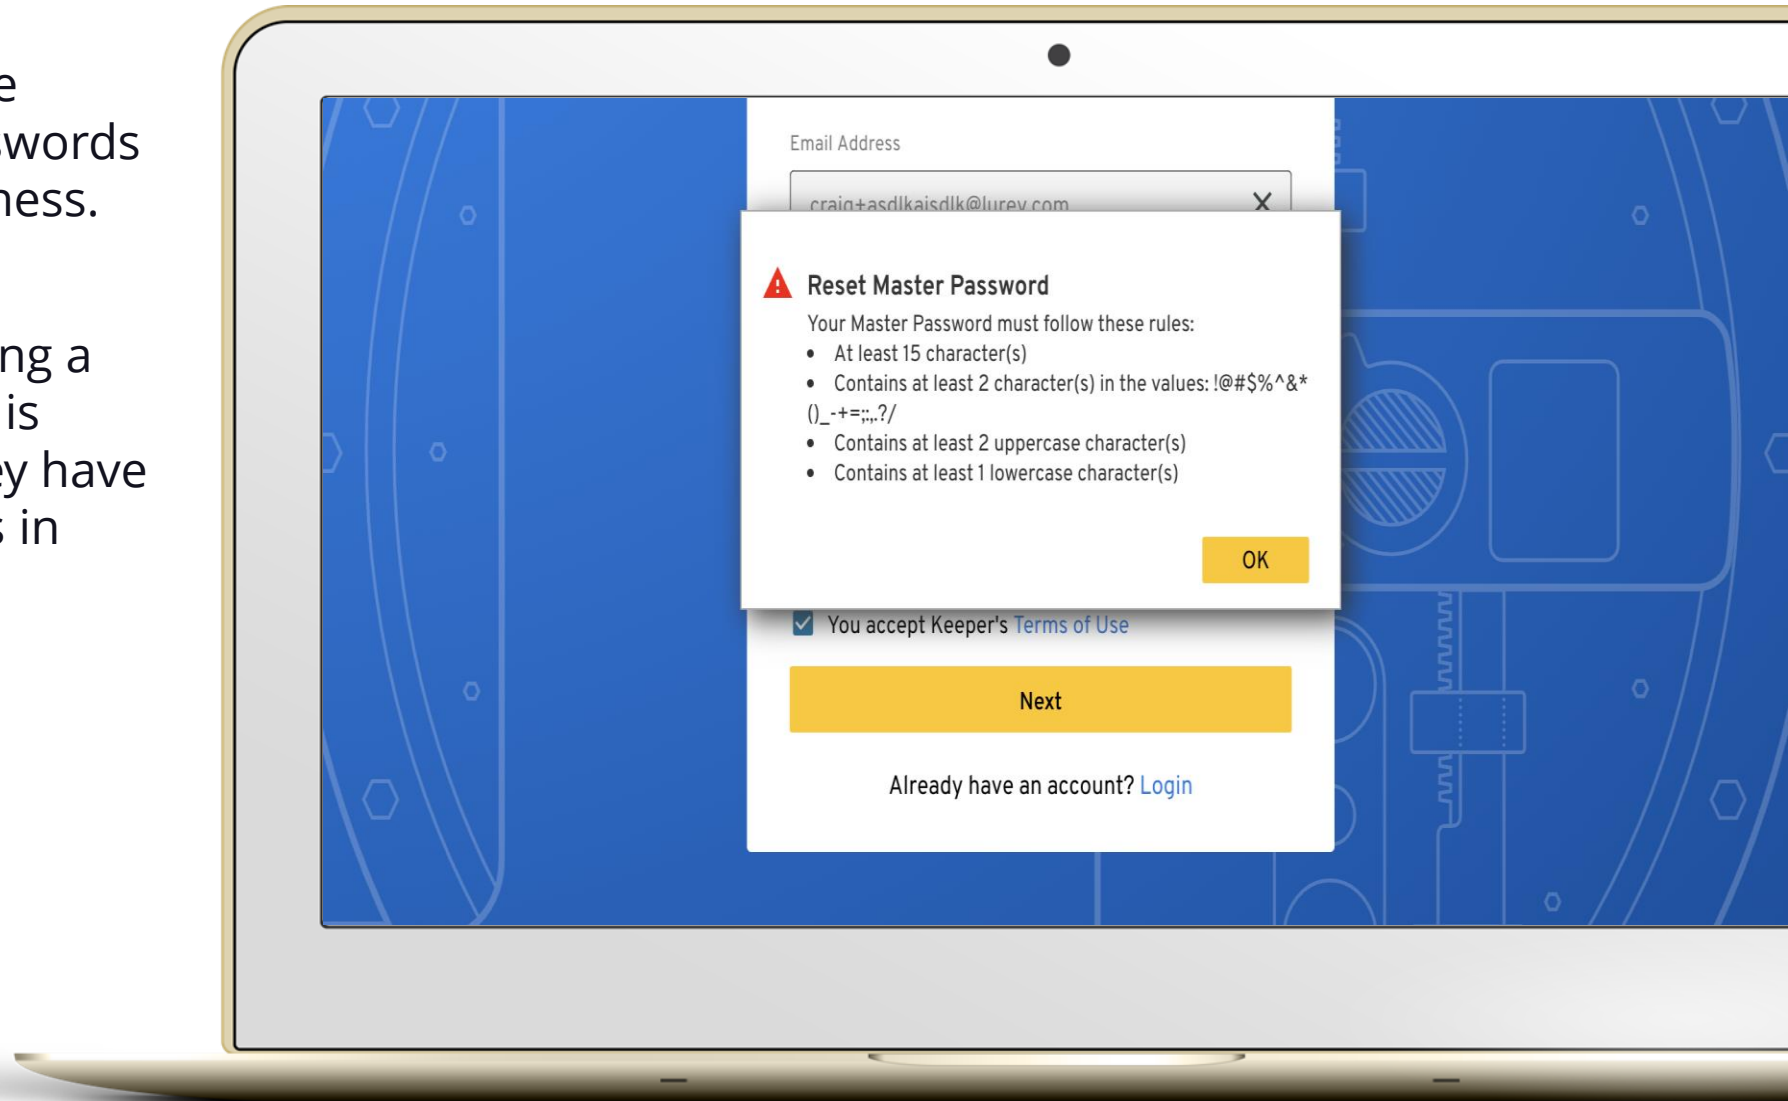

In the case of shared passwords, businesses can choose to prevent employees from ever seeing the password, whilst still being able to use it when logged into the tool.

# Policy Enforcements

The policy enforcement feature means that staff must set passwords based on rules set by the business.

For example, the tool can be configured so that when creating a password, staff must ensure it is unique to other passwords they have saved and at least 8 characters in length.

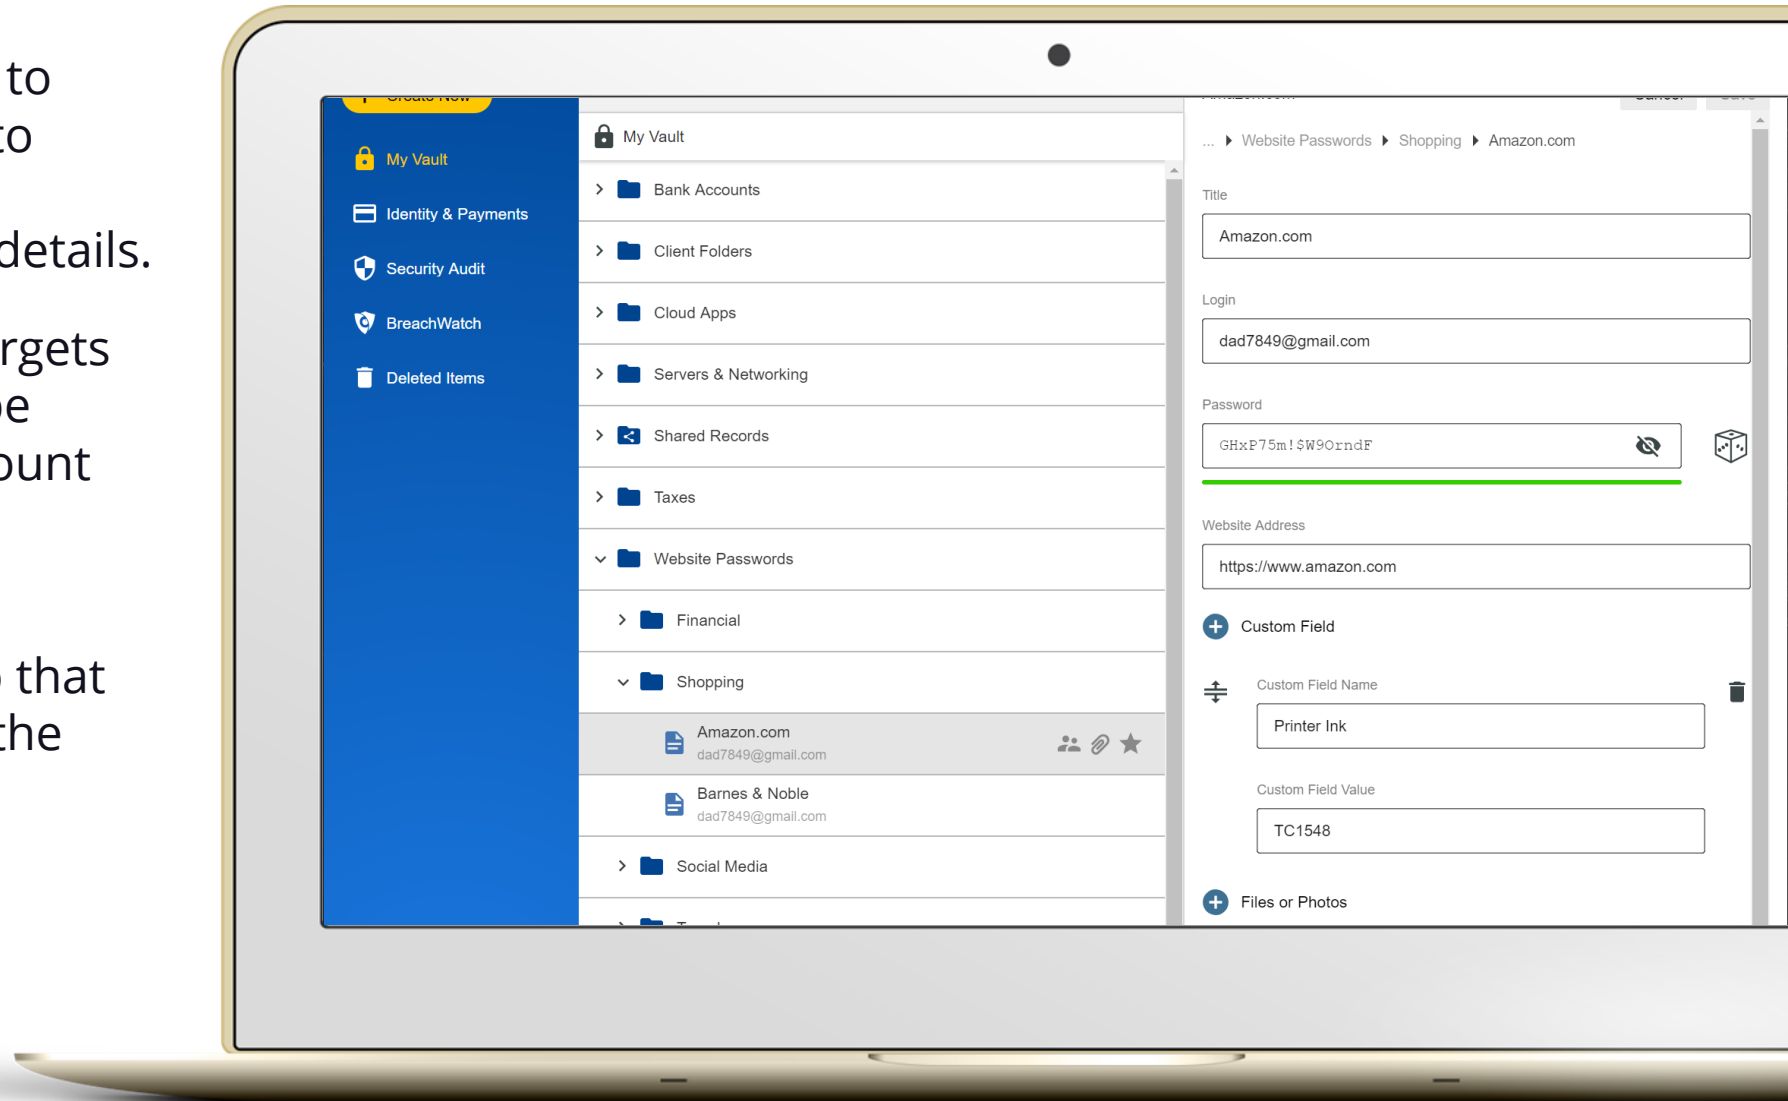

# Encrypted Vault

An encrypted vault is available to every user which can be used to store information such as passwords, files and payment details.

In the event of an employee forgets their password, the vault can be transferred to a dedicated account so the data is not lost.

Should an employee leave, the business can close the vault so that they no longer have access to the passwords in their vault.

# Security Audit

The security audit feature provides users with insights into their overall passwords security, giving them a score based on all the passwords stored within the tool.

The security audit will flag any passwords that are reused or weak.

This individual score feeds into a score for the organisation which can be used to enforce internal controls and maintain compliance standards.

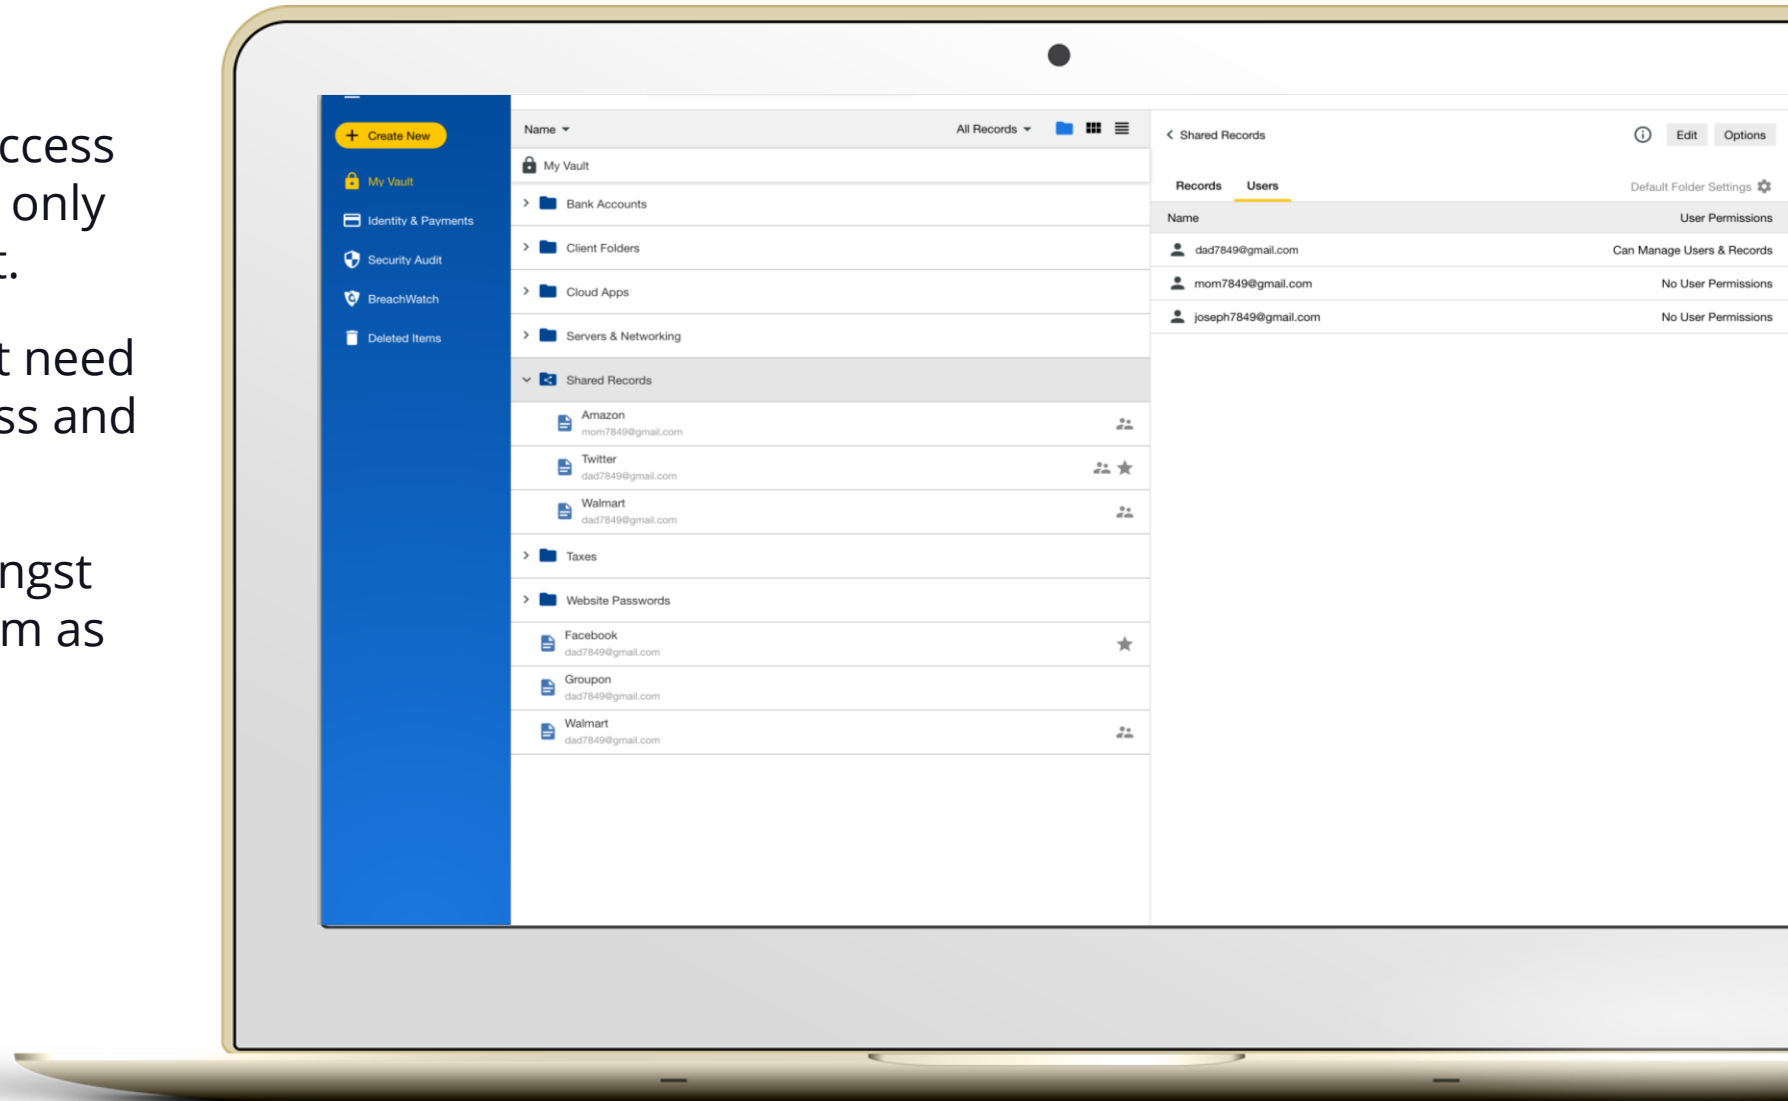

# Role Based Controls

With role based controls, your organisation can ensure that access to software and applications is only granted to those that require it.

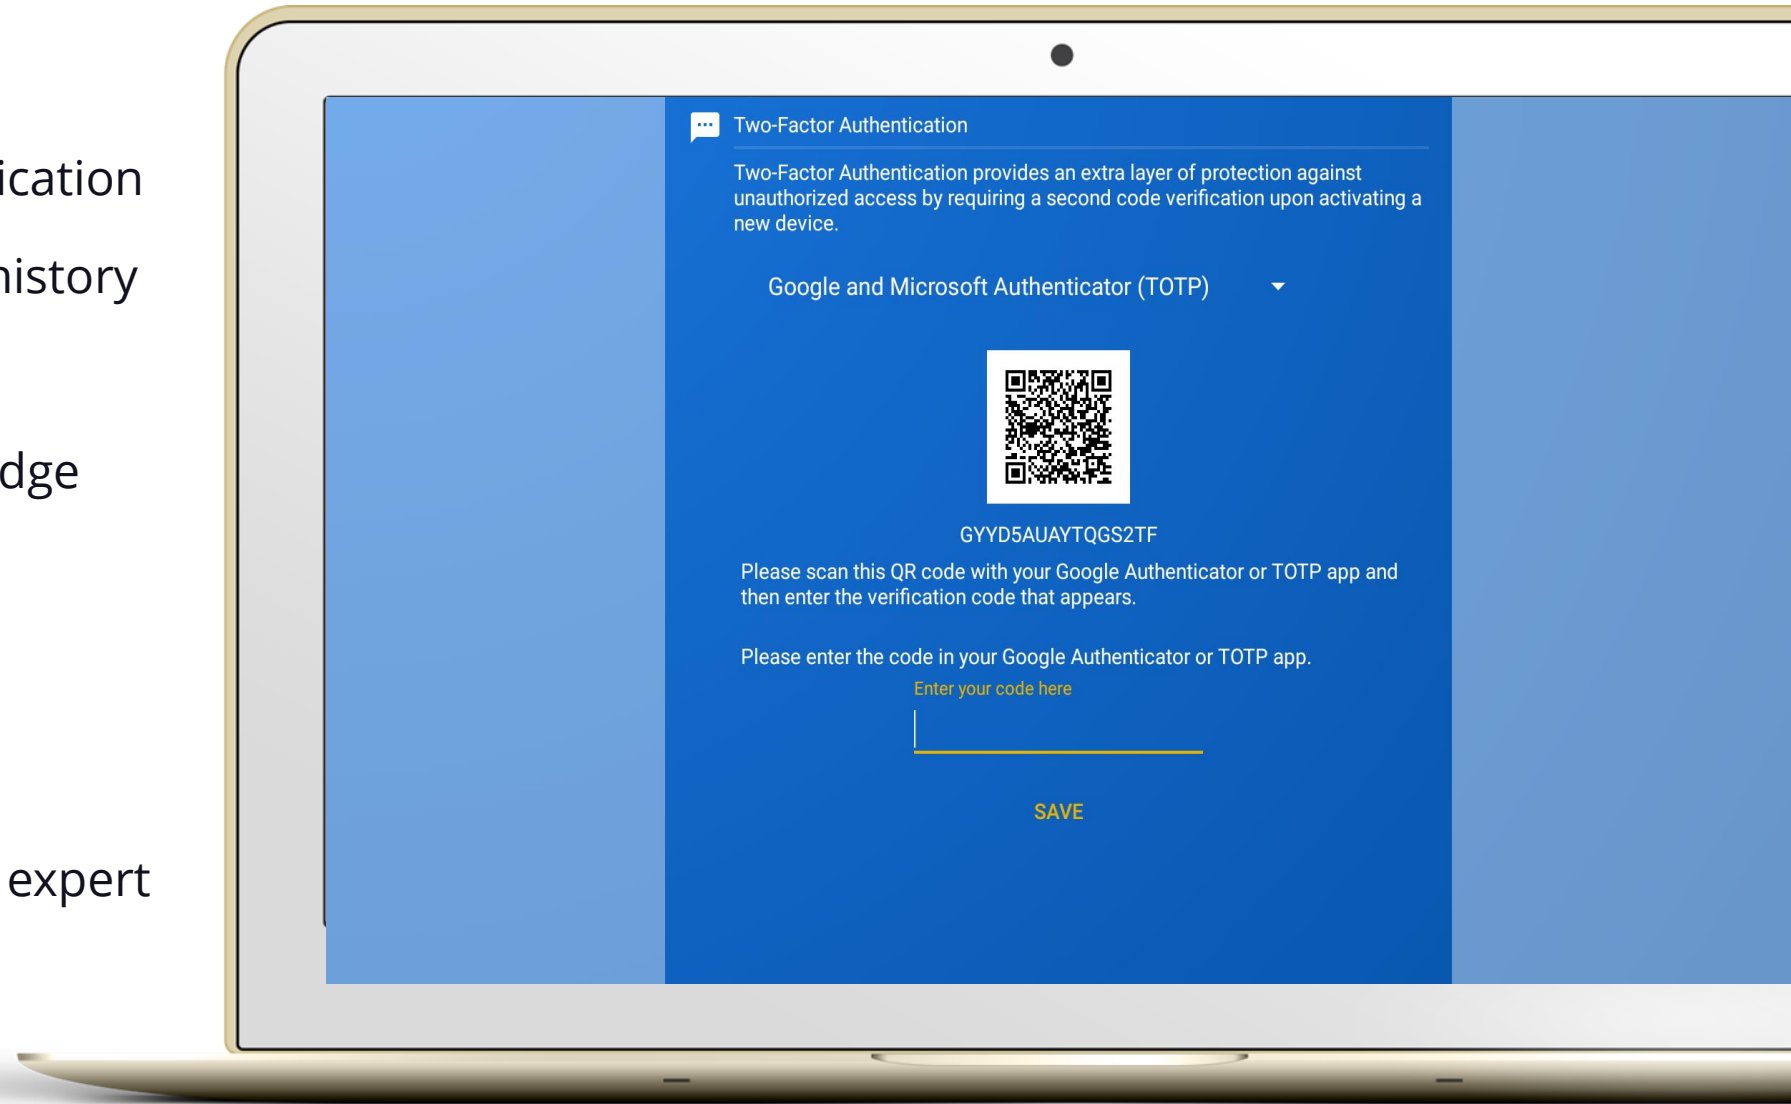

Restricting access to those that need it improves traceability of access and reduces the risk of a breach.

Passwords can be shared amongst individual users or a whole team as required.

# Other Features Include

- Secure file storage
- Built in multi-factor authentication
- Version control and record history
- Robust admin console
- Zero-Trust and Zero-Knowledge security architecture
- Record-level encryption
- Works seamlessly across all devices
- Set up and managed by our expert team

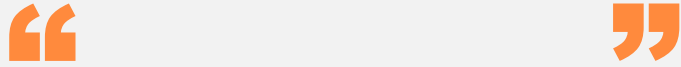

# Benefits To Your Organisation

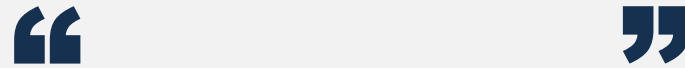

- Reduces the risk of a data breach.
- No need to change passwords when an employee leaves, simply remove their access.
- No more sharing passwords, writing them down or saving in a low security shared document such as a spreadsheet.
- Eliminate usage of weak or easy to guess passwords in your business.
- Only those that need access have access – enabling more robust security auditing and better traceability.

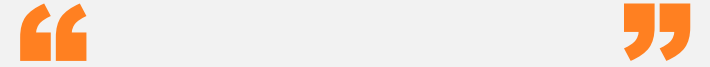

# What Our Customers Say

The charity I work for has been using Absolutely PC for a few years now, and I have been very impressed with their service, professionalism, and efficiency.

I have worked closely with Absolutely PC for a number of years. The service they offer is friendly and professional.

I would certainly recommend this company. I have used Absolutely PC for my company IT support for several years now. I can't fault them at all.
