

Absolutely PC – Password Checklist

To ensure your systems are secure, be aware of the following when choosing your passwords:

- ✓ **Avoid choosing obvious passwords (such as those based on easily discoverable information like the name of a favourite pet).**
- ✓ **Ensure the password is a minimum of 8 characters in length with at least 1 uppercase, one number, and one special character.**
- ✓ **Don't choose common passwords such as "password"— this could be implemented by technical means, using a password blacklist.**
- ✓ **Don't use the same password anywhere else, at work or at home.**
- ✓ **Avoid storing a record of your password anywhere, unless you are using [password management software](#).**
